

## The New CMI Reporting is Here

Between your commitment to providing timely and accurate documentation, maintaining project transparency, and working with multiple devices or platforms to record job and pile data, it can be overwhelming. We want to make your job easier, which is why we are excited to offer CMI Reporting.

### SYNCHRONIZE

Synchronize & back up all job and pile data on CMI's Cloud servers.

### COMPATIBILITY

Import and store data from either our TorqApp or RF display units

### SECURE

Keep your data safely stored. You also won't have to rely on storing data on multiple devices.

### STAY COMPLIANT

Remotely download data from active jobs in the field, allowing you to meet your clients' reporting requirements.

### JOB PREPARATION & EXPORT

Enter your job and pile data prior to starting your job on a Windows 10/11 device, and export it to any display device, including TorqApp for WiFi systems or CMI's RF Display. Keep your installers productive by removing data entry from their tasks.

### DEVICE MANAGEMENT

Add, delete and edit all display devices within your company, including smartphones, tablets, and RF display units.

## A Better Reporting Solution

Looking for a better solution to keep your data organized and safe while streamlining reporting? Download our new support software, CMI Reporting, to make installing helical piles even easier.
